We at Harry's Painting would like to submit to you our testimonial on the benefits of the use of the Copper Slag.

Copper slag is a by-product slag abrasive. The composition may vary. This abrasive fractures in sharp angular particles. Copper slag increases productivity by 10% and cuts cost by 5%. Copper slag, still generates dust and it is a one time use. My personal opinion, I like copper slag better then the coal slag.

Sincerely,

Harry Tsioukanaras
