

To whom it may concern:

Just wanted to thank you for introducing my company to the Ebony Grit Copper Slag product. I have been a mainstay user of coal slag for many years. Your Representative in my area, Kevin Walters, has discussed the Ebony Grit several times with me, I felt this was just another version of the Coal Slag. I ran into a situation on a blast project that the Coal Slag was creating too much dust and not performing the task of proper paint removal, it was then that I decided to order Ebony Grit in hopes of a 'miracle'.

Not only did I find the product to work better, but also the dust level was much lower! I used about one of your 55# bags to every 100# bag of coal slag! I was able to get the project done in my time schedule and with much less clean up because I was able to use less product! Since this project, I have had additional jobs that in which I have used the Ebony grit with the same successful results! It has been the most effective slag product that I have ever used. We will continue to use this product in the future. If you have any further blast materials you may suggest- please come forward- I appreciate Kevin's knowledge and expertise.
Sincerely,

Luke Jesonowski
President - Streamline Painting.
